A PROJECT REPORT ON

ComicCraft

AI Comic Story Creator using Gemini Models

Submitted in partial fulfilment of the requirements under the

**NAAN MUDALVAN (NM) SKILL DEVELOPMENT
PROGRAMME**

SUBMITTED BY

DEPARTMENT OF BACHELOR OF COMPUTER APPLICATIONS

MADRAS UNIVERSITY

ACADEMIC YEAR : 2025-2028

Introduction – ComicCraft

- **ComicCraft** is a web-based application that uses **Artificial Intelligence** to create comic stories.
- Users can enter a **story idea, character name, setting, tone, and art style**.
- **Google Gemini** is used to generate the story, narration, and dialogues.
- **Stable Diffusion** is used to create comic-style illustrations.
- The system creates the comic **panel by panel**.
- Users can **view the generated comic** through the web interface.
- The comic can also be **downloaded as a PDF**.
- The main aim is to make **comic creation simple and easy** without professional drawing or storytelling skills.

OBJECTIVE

The main objective of ComicCraft is to develop an AI-powered system that can automatically transform a simple story idea into a complete comic.

- To generate creative comic storylines using AI.
- To generate character dialogues and narration.
- To create comic-style illustrations automatically.
- To allow users to customize the story using different inputs.
- To provide different tone and art-style options.
- To display the generated comic panel by panel.
- To provide an option to download the completed comic as a PDF.
- To make comic creation easy for non-artists and casual users.

EXISTING SYSTEM AND PROPOSED SYSTEM

Existing System

- Comic creation is mostly done **manually**.
- Users need to create the **story, characters, drawings, and panels**.
- It takes **more time and creative effort**.
- Users may need **drawing and storytelling skills**.

Proposed System

- **ComicCraft** uses AI to make comic creation easier.
- Users only need to enter their **story idea and preferences**.
- The system automatically creates **story, dialogues, images, and comic panels**.
- It uses **Gemini, Stable Diffusion, FastAPI, HTML, CSS, and Jinja2**.
- The complete comic can be created **quickly in one system**.

Technologies Used

Python:

- Used as the main programming language.

FastAPI:

- Used to develop the **backend** and handle user requests.

Google Gemini:

- Used to generate **comic stories, narration, and dialogues.**

Stable Diffusion:

- Used to create **comic-style images and illustrations.**

HTML & CSS:

- Used to create and design the **web page.**

Jinja2:

- Used to **display generated content** on web pages.

Uvicorn:

- Used to **run the FastAPI application** locally.

System Architecture

ComicCraft consists of three major components:

1. Frontend:

The frontend is developed using **HTML, CSS, and Jinja2**. It collects user information and displays the generated comic.

2. Backend:

The backend is developed using **FastAPI**. It manages user requests, routes, AI processing, comic layout, and PDF export.

3. AI Integration:

Google Gemini models generate the story content, while Stable Diffusion generates the illustrations.

Basic Workflow

User Input → FastAPI Backend → Gemini AI → Story Generation → Stable Diffusion → Image Generation → Comic Layout → PDF Export

Implementation

1. **Project Setup** – Set up Python and install the required libraries.
2. **Model Connection** – Connect Gemini and Stable Diffusion to the application.
3. **Story Creation** – Gemini creates the story, narration, and dialogues.
4. **Image Creation** – Stable Diffusion generates images for each comic panel.
5. **Comic Layout** – Arrange the images and text into comic panels.
6. **Web Interface** – HTML, CSS, and Jinja2 are used to create the web page.
7. **Testing** – Run the application using Uvicorn and test it through the web browser.

Input Screen vs Output Screen

Input Screen:

- **Story Prompt** – Main idea of the story.
- **Character Name** – Name of the character.
- **Setting** – Place where the story happens.
- **Story Tone** – Mood of the story.
- **Art Style** – Style of the comic image.

After entering the details, the user clicks the Generate Comic button

Output Screen:

- Shows **comic panels with images**.
- Displays **story, narration, captions, and dialogues**.
- Panels are shown **one after another**.
- Users can **download the comic as a PDF**.

OUTPUT

Conclusion:

- **ComicCraft** uses AI to make comic creation **simple and easy**.
- It converts a user's idea into a complete comic with **story, dialogues, and illustrations**.
- The comic can be **downloaded as a PDF**.
- It helps users create comics **without professional drawing skills**.
- The system can be improved in the future with **user profiles, comic libraries, and longer stories**.
